

#### EMERGENCY PREPAREDNESS CHECKLIST

## **Extreme Heat**

#### **GENERAL PREPARATION**

Confirm insurance eligibility for extreme heat coverage.
Confirm if the landlord or business owner is responsible for cooling.
Develop a procedure to communicate with staff and

#### **BEFORE THE HEAT**

customers.

- Check your Emergency Preparation Kit.
  - Is everything well stocked?
  - Is everything working?
- Check thermostats are set properly. The recommended range for cooling is 74-78° F. Avoid setting the thermostat lower than 74° F, as it could overwork the HVAC system and potentially cause additional problems.
- Move hot-weather Kit items somewhere convenient to access.

- Install window reflectors, like foil-covered cardboard, to reflect heat back outside.Close curtains.
- Seal doors and windows with weather strips.
- Inspect sprinkler system. Notify the fire department if there are any problems.
- Consider investing in HVAC preventative maintenance so cooling can be inspected regularly.
- Cover outdoor patio with shade (if applicable).

### **EMERGENCY PREPAREDNESS CHECKLIST**

# **Extreme Heat**

#### **DURING THE HEAT**

Keep air conditioning running
inside the restaurant. Reminder: do
not set the thermostat below 74° F.

- Ask staff to wear loose-fitting, light-colored clothing to stay cool.
- Ask staff to drink plenty of water or other fluids with electrolytes.
- Be on the lookout for signs of heatrelated illness from customers and staff.
- If the restaurant will be closed, assign a staff member to check on interior temperatures.

## **AFTER THE HEAT**

86 Repairs customers should call or text for assistance with any damaged equipment or infrastructure.
