

EMERGENCY PREPAREDNESS CHECKLIST

## **Grease Trap Backup**

| GENERAL PREPARATION |  |    |   |
|---------------------|--|----|---|
|                     | Avoid any and all debris from<br>entering the plumbing system by<br>covering all floor drains with grate<br>covers and closing those grate<br>covers before the kitchen floors are<br>cleaned. |    | If you do not currently have a<br>grease trap preventative<br>maintenance plan and are an 86<br>Repairs customer, contact your<br>Account Manager to get it set up. |
|                     | Clean small grease traps that are contained inside the restaurant every other week.  | DU | RING A BACKUP<br>Stop water flow to avoid additional<br>pressure on the drains.   |
|                     | Ensure large grease traps that are<br>outside the restaurant are cleaned<br>once a quarter through a local<br>vendor.  |    | Open windows and doors to vent<br>any unpleasant odors outside.   |
|                     | If the restaurant is high-volume and<br>has newer pipes and plumbing, ask<br>a vendor to perform line jetting<br>twice per year.   |    | Use sand to absorb any grease that<br>may have come up from the drains.<br>Try using a metal drain snake,<br>plunger, and/or wet vac to clear<br>the clog.          |
|                     | If the restaurant is low-volume with<br>older pipes and plumbing, ask a<br>vendor to perform line cabling as<br>part of your preventative<br>maintenance.                                      |    | If clog cannot be resolved by the<br>internal team, 86 Repairs<br>customers should call or text to<br>dispatch a plumber immediately.                               |
